Tatiana Zainullina

Backend Software Engineer

Berlin, Germany | +49 174 293 5934 | tat.zains@gmail.com | LinkedIn
EU Blue Card (Germany) — full right to work | Fully remote-ready

PROFILE

Backend engineer with ~9 years of professional experience in regulated Financial Services (Deutsche Bank, Sberbank), including 4+ years hands-on Java/Spring Boot development. Track record of owning complex system redesigns end to end, from design through production. Built event-driven microservices on a pub/sub architecture (Solace) at scale. Comfortable in fault-tolerant, high-throughput systems where correctness matters. Completed a structured DevOps program covering AWS and Kubernetes (2026).

TECHNICAL SKILLS

Languages: Java 11/17, SQL, JavaScript/TypeScript, Bash
Backend & Architecture: Spring Boot, Microservices, Event-Driven Architecture (Solace), REST APIs, fault-tolerant distributed systems
Frontend: Angular (admin/internal tooling)
Databases: Oracle PL/SQL development (stored procedures), query optimization, execution-plan analysis, Flyway, Hadoop/HDFS
Testing & Code Quality: JUnit 5, Mockito, Cucumber (BDD), TDD
Build & Tooling: Maven, Gradle, Git, TeamCity, SonarQube
DevOps: Kubernetes, AWS, Terraform — completed structured DevOps program (2026)
Methodology: Agile/Scrum, code reviews, ownership-driven delivery, cross-functional collaboration
Mentoring: mentored graduate students on technical/research methodology (~6 months, remote)

WORK EXPERIENCE

Software Engineer | Deutsche Bank AG, Berlin, Germany *Aug 2021 – May 2025*
Market Risk domain (team xVA) — event-driven Java microservices coordinating valuation calculations across a 20,000-CPU compute grid.

- Led the redesign of the risk computation engine, replacing a hardcoded dependency DAG with a config-driven orchestration framework that allowed calculations to resume from any step and reuse results from previous batches, avoiding full recomputation while maintaining zero regressions.
- **APIs and concurrency at scale:** built Java/Spring Boot services on an event-driven architecture (Solace pub/sub), handling concurrency-heavy async batch processing across a 20,000-CPU compute grid.
- **Scale:** scaled batch processing to 1M+ objects per run, increasing throughput for daily risk calculations.
- **Ownership — testing tooling:** built an internal BDD test tool (Cucumber) from scratch that cut team-wide data preparation time from 1 day to 1 hour.
- **Ownership — release automation:** built an automated release-validation report from scratch, comparing data across versions — cut QA's manual reconciliation from 2 days per release to near-zero.
- **PL/SQL and in-database logic:** wrote and maintained PL/SQL alongside Java throughout the role — stored procedures, data validation, and, where it made sense, calculation logic run directly in the database rather than the application layer.
- **Frontend ownership:** built and maintained an internal Angular admin tool for monitoring and configuring risk-calculation jobs, used daily by the team.
- **Team delivery under constrained capacity:** took on extra tech debt and ran knowledge-transfer sessions to protect the team's capacity while also serving as Scrum Master — the 4-person team delivered a business feature in Q1 against expectations that the quarter would go entirely to onboarding.

PL/SQL Developer / Data Analyst | Sberbank Rossii, Moscow, Russia *Aug 2016 – Jul 2021*
Regulatory Reporting — SQL-based data aggregation and validation for mandatory compliance reporting across 100M+ customer accounts.

- **Data pipelines:** designed and optimized PL/SQL scripts for data processing, aggregation, and validation feeding mandatory regulatory reports.
- **Data integrity:** ensured accuracy, consistency, and compliance with regulatory standards; traced and resolved discrepancies back to their source.
- **Requirements:** translated regulatory and business requirements into technical specifications for the development team.

Assistant Watch Officer (career break, planned) | Frigate Shtandart, La Rochelle, France *Jun 2025 – Dec 2025*

- Sailed 2,500 nautical miles offshore; coordinated a 25–30-person crew during 4-hour watches under a fixed chain of command.

EDUCATION

National Research Nuclear University MEPhI, Moscow
MSc, Applied Mathematics and Informatics — Sep 2016 – Jun 2018
BSc, Computer Science (Applied Informatics) — Sep 2012 – Jun 2016

LANGUAGES

English (fluent), Russian (native), German (A2), French (A1, actively studying)
